

Note: when measuring Dimension B take the smallest clearance as the pots are rarely perfectly round. The best way of doing this is using an extending tape measure inside and rotating it around within the pot and extending or retracting it as required. Don't forget to add on the width of the measure to provide the true 'smallest' INTERNAL diameter

Dimension D is measured from the 4 internal stays (point X is one of them) to the top of the crown points. Again use a tape measure internally to measure this height

Bishop/Crown Pot Template

	Solid Fuel Or Gas Use ?
Dimension B.....	Stainless steel
	Redundant Flue?.....
Dimension D.....	Notes:
